

Phase 6: User Interface Development

In this phase, the focus is on creating an engaging and efficient **Lightning Experience interface** for SkillSync. The goal is to design layouts, components, and interactions that make it easy for users (Admins, Employees, Mentors) to use the platform effectively.

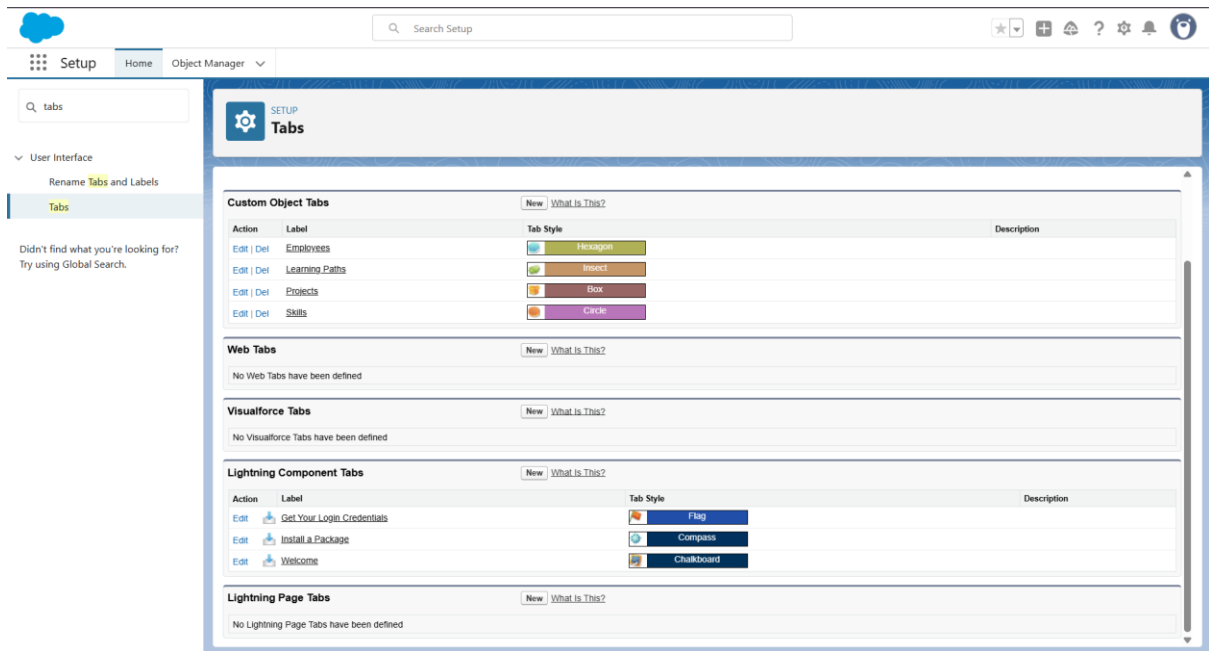

1. Lightning App Builder

- Used to build **custom pages** (App Pages, Record Pages, and Home Pages) without code.
- For SkillSync:
 - Created a **SkillSync App Page** with dashboards and quick links.
 - Designed mentor/mentee-specific **record pages** with skill progress and learning resources.

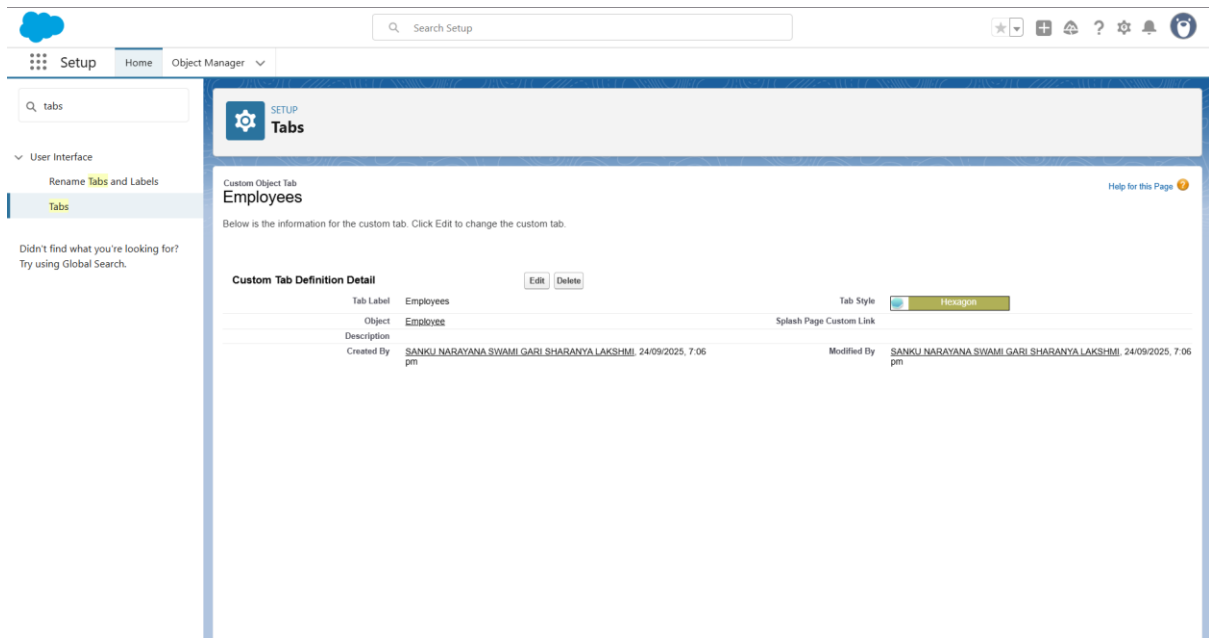

2. Record Pages

- Configured **custom record pages** for entities like **Employee, Mentor, Learning Path, Engagement**.
- Highlight panels were customized to display:
 - Employee's skill level.
 - Assigned mentor details.
 - Current learning path progress.

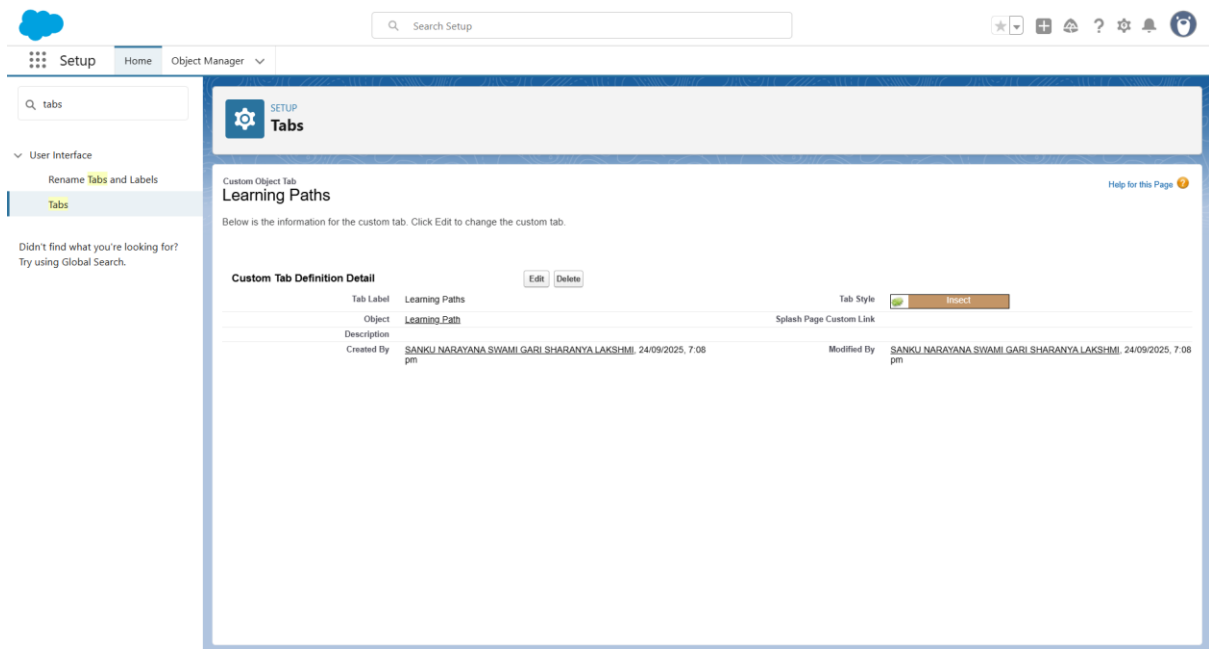

3. Tabs

- Added **custom tabs** for key SkillSync objects:
 - **Employees**

- **Mentorship Programs**
- **Learning Paths**

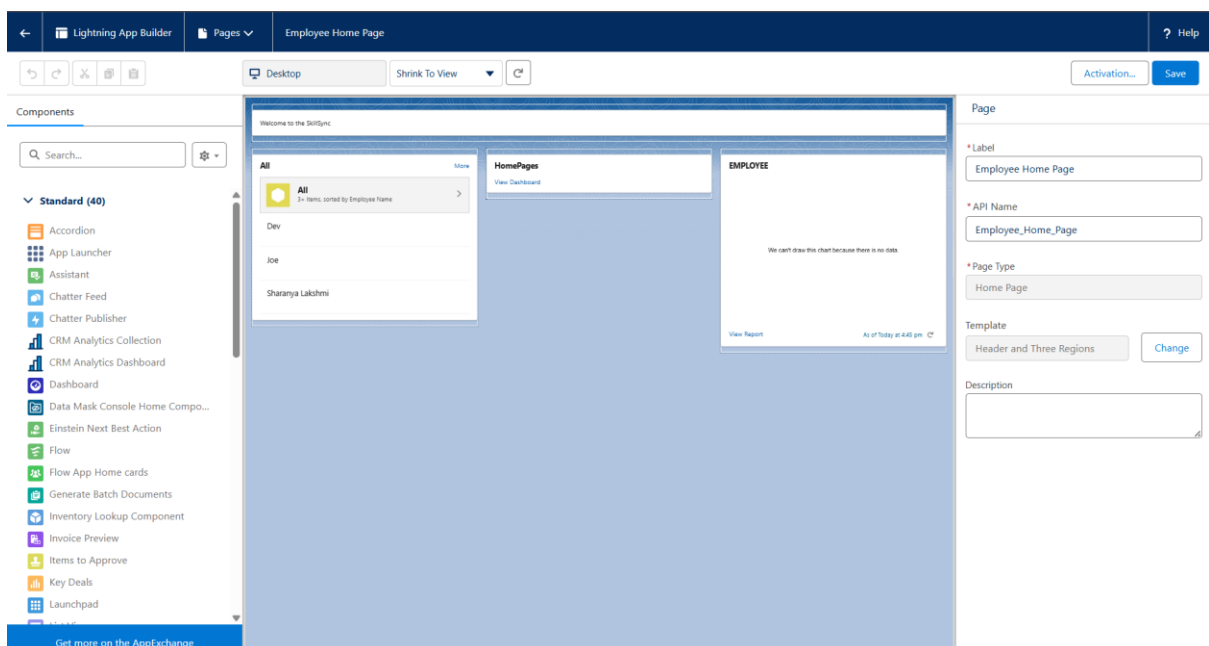

○ Engagement Reports

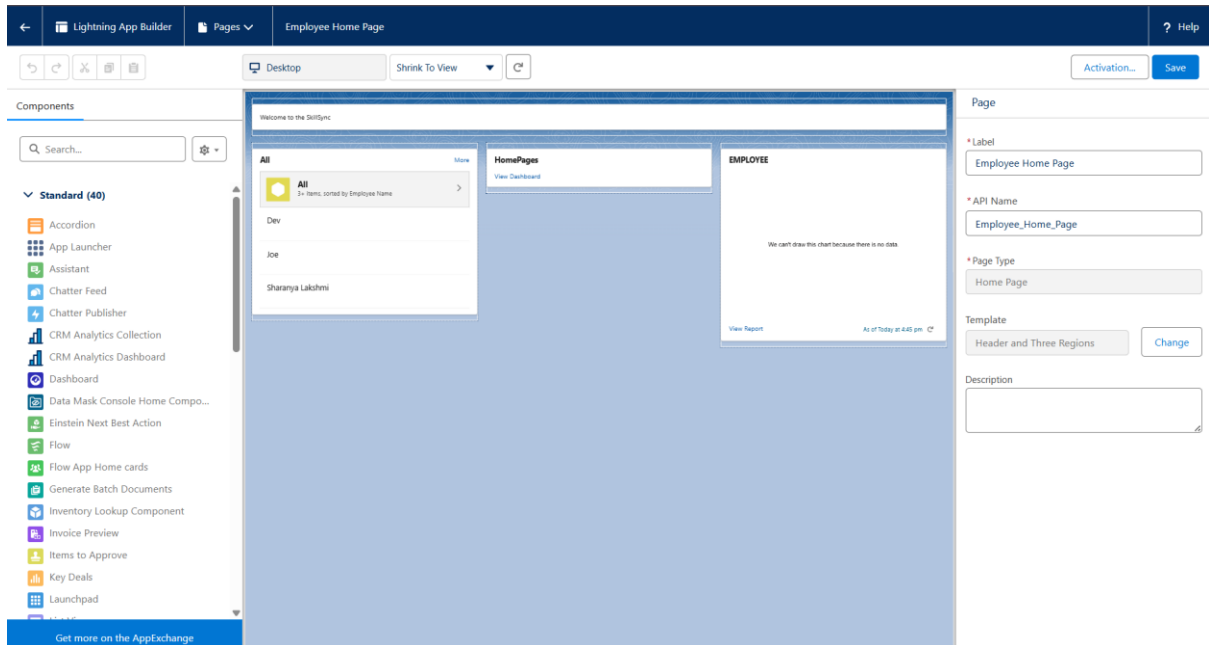

- Provides easy navigation for end users.

4. Home Page Layouts

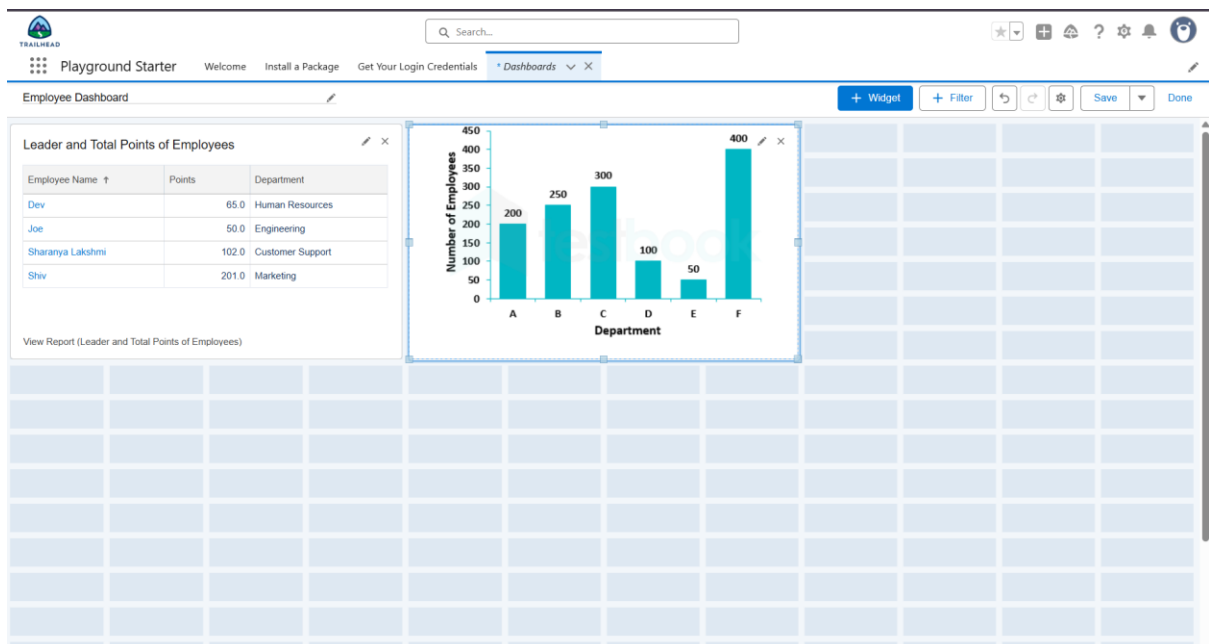

- Created role-based **Home Pages**:
 - **Employee Home Page** → Shows learning progress, assigned mentor, upcoming sessions.

- **Mentor Home Page** → Shows mentee list, session schedules, feedback tasks.
- **Admin Home Page** → Includes dashboards, reports, and system monitoring.

With the HomePage, the Admin can access the dashboard, where the details of the employs are present.

Phase 6 Outcomes:

Successfully Developed the User Interface using Lightning App Builder.
